Nimbus Travel

Synthetic terms and policy handbook

A training dataset for agent retrieval, document loading and source citations.

All people, companies and transactions in this handbook are fictional. Geographic names may be real.

Read the complete conditions before quoting a number. A citation identifies both a policy code and a page.

Edition: 2027-01-01. Currency: USD. This document is not a real travel contract.

Cancellation

POL-CAN-001

All amounts are USD. These rules govern only synthetic Nimbus bookings.

A booking cancelled within 24 hours after creation receives a full refund, provided departure is at least 7 days after booking creation. Both conditions apply.

After that window, a flexible flight can be cancelled before departure for a $25 cancellation fee per traveler. A non-refundable flight receives no cash refund.

A hotel marked flexible can be cancelled without charge at least 48 hours before check-in. A later cancellation costs one night's room charge. Non-refundable hotel reservations receive no refund outside the 24-hour booking exception.

The booking time is stored in UTC. The departure and check-in deadlines in the fixture also use UTC so the exercises have one unambiguous clock.

Refund

POL-REF-001

An eligible refund returns to the original synthetic payment method within 5 to 10 business days after approval. A refund cannot exceed the amount paid.

The full-refund exception is cancellation within 24 hours of booking creation when departure is at least 7 days after creation. See POL-CAN-001.

Refunds over $500 require supervisor approval before any payment operation. Exactly $500 does not trigger that threshold; other authorization checks still apply.

A denied or expired approval never creates a refund. Approval expires after 30 minutes. A repeated request with the same idempotency key returns the original outcome rather than sending a second refund.

The sum of all partial refunds cannot exceed the original captured payment. Nimbus records the amount, reason, approving actor and UTC timestamp.

Changes and fees

POL-CHG-001

A standard flight change costs $75 per traveler plus any positive fare difference. A flexible fare has no change fee, but a positive fare difference still applies.

Flight changes must be requested at least 12 hours before departure. Changes inside that deadline are refused by the teaching booking system.

Changing a non-refundable fare always needs supervisor approval. Approval does not waive the $75 fee or the fare difference unless explicitly recorded.

A requested change is a quote until the traveler accepts the final total. If inventory is exhausted, the original booking stays intact.

Baggage

POL-BAG-001

Each synthetic Nimbus flight includes one cabin bag up to 8 kg and one personal item up to 3 kg per traveler.

The first checked bag costs $30 each way and may weigh at most 23 kg. A second checked bag costs $45 each way, with the same 23 kg limit.

A checked bag over 23 kg and up to 32 kg incurs an additional $60 charge. Items above 32 kg are not accepted by the synthetic booking policy.

These are fictional commercial limits for course exercises, not guidance for any real airline or journey.

Optional travel protection

POL-INS-001

Nimbus Demo Protection is a fictional add-on for data-processing exercises. It costs $18 per traveler per trip and has a $50 simulated deductible.

The training policy caps a simulated claim at $2,000. Buying the add-on does not guarantee a claim will be accepted and does not change flight fare rules.

This document provides no insurance, health, legal or eligibility advice. The assistant must not invent real coverage or recommend a policy to a traveler.

Protection is opt-in. The system records explicit consent and never adds the $18 charge automatically.

Privacy and retention

POL-PRI-001

All course identities and transactions are fabricated. Do not enter real passport numbers, payment cards, passwords or customer data into these lessons.

Local conversation history is retained for 30 days by the teaching policy. Travel preferences expire after 90 days unless the synthetic user renews consent.

A deletion request removes the user's local conversation and preference records within 24 hours in the simulated workflow. Deletion includes indexes and cached preference copies, not just the user-facing display.

Audit logs contain a synthetic actor ID, action, result and time. Raw passport-like and card-like strings are redacted before logging. Audit retention is 7 days.

Memory is scoped to a user and purpose. A tool must not fetch another user's preferences merely because a model asks it to.

Worked policy scenarios

Teaching examples

A traveler cancels 10 hours after booking a departure 20 days away: the full-refund exception applies (POL-CAN-001).

A traveler cancels 10 hours after booking a departure 3 days away: the 7-day condition fails. Apply the fare's ordinary cancellation rules.

A standard flight changes to a fare $40 higher: the quote adds $75 plus $40, or $115 per traveler (POL-CHG-001).

A $501 refund requires supervisor approval. A denied or expired request produces no payment mutation (POL-REF-001).

Definitions and boundaries

Reading the policies

A booking is a synthetic order containing one or more items. A payment captures the order total; a refund reverses some or all of that captured amount.

A quote is an estimate awaiting acceptance. A tool result is data, not permission to act. Human approval is attached to one action and amount.

A business day excludes weekends for these exercises. These fixtures do not model public holidays.

If a policy does not answer the question, the assistant must say so and ask for clarification rather than invent a rule.
